# ProfiHunt 2017

LIVING LIFE AT THE TOP

Vladimir Melnikov  
CEO

Dear Members & Guests,

We have been operating in Russia and Asia since 1990. ProfiHunt would like to say a big thank you to all our members for their continual support over the past 26 years. All these years we did our best to meet your hunting needs, to follow your advices and be your hunting guides again and again.

I am confident that we can provide you with the best service in Russia and Asia from the beginning to the end of your adventure as well as the best hunting areas and guides. I am proud of our set up in Moscow which allowing us to be with you 24/7.

We are very happy receiving reports as below from our clients. ***"I am writing this letter to thank SCI and ProfiHunt for a wonderful hunting in Mongolia. I was successful and got two ibex. I was especially impressed by the attention I received from ProfiHunt – they stuck with me provided help when needed. They maintained the contact all 3 weeks I was outside of the United States."*** Norman A. Stewart

2016 has been a very active year once again for the ProfiHunt team. Jim Shockey joined us in 2016 also for a brief hunting spell in Russia where he ended up with 2 different species of Snow Sheep, Amur Brown Bear, Pacific Walrus, Siberian Roe Deer taken in European part of Russia, European Moose and Chukotka Moose making this a great end of year hunting edition for all at ProfiHunt.

2016 was filled with many great hunts and perfect trophies but it got just a little better for Danish hunter Soeren Sodemann who has taken a moose with amazing almost 77" size antlers. Probably it will be a new world record.

We hope you enjoy our new edition and look forward to Hunting with you soon.

**VLADIMIR MELNIKOV**  
Founder

Vladimir was born in 1965 in Siberia where he graduated from the Game Management Faculty. His father is a big hunter, wildlife biologist, professor and has over 150 research articles, books about wild game and hunting. Vladimir was taken hunting when he was a child and, of course, he was one of the first Russians who went hunting in Africa and other continents. Vladimir was a director of the Hunting Department of the Russian Federation (RF) from 2006 to 2010, then Deputy Minister of National Resources and was responsible for hunting, Flora and Fauna of RF.

**VLADISLAV MELNIKOV**  
Chairman

Chairman, Professor of Wildlife Management, Member of the Academy of Sciences of Russia. Took a great part in founding ProfiHunt company. Worked out many articles and regulations for the main Russian hunting law. Devoted his life to hunting in it's every side.

**ARTEM VESELEV**  
General director

Artem is General Director of ProfiHunt. He has been working for ProfiHunt since 2004. He deals with agencies and clients from all over the world. Artem speaks fluent German and French and very good English. He was born on 2 December 1978 in Tolyatti, Russia. In 2001 he graduated from the Department of the Foreign Languages of the Vladimir State University. In 2010 he finished his education at the Moscow Financial Academy, Department of Finances and Credit.  
E-mail: Jagd@profihunt.com  
Skype: ProfiHunt-Jagd

**DENNIS SHADOW**  
Hunting department manager

Hunting department specialist. Works mainly with Foreign and Russian clients for Russian and Asian hunts, but is knowledgeable a lot about African and European destinations. Denis joined ProfiHunt in June 2008 and have already proved to be responsible and eager to work out every single detail of each journey he arranges. His clients are sure to occur in good and friendly hands!  
E-mail: Hunt@profihunt.com  
Skype: ProfiHunt-Asia

**ALEXANDER MELNIKOV**  
Hunting department manager

Alexander was 13 years old when he hunted his first African trophies such as zebra, impala, warthog and participated in elephant, buffalo and lion hunts with his father. Upon entering into the taste, Alexander began to take part in hunting trips in Kamchatka, the Caucasus, Kyrgyzstan, Kazakhstan, Spain and all over Russia. He graduated from the "Academy of National Economy and Public Administration under the President of the Russian Federation", speaks perfect German and good English.  
E-mail: Russia@profihunt.com  
Skype: ProfiHunt-Russia

**ALEXEY PAVLOV**  
Hunting department manager

A member of Hunting Department staff, deals with Russian and english speaking hunters. In the year of 1995 Alexey completed his studies at Moscow Teachers Training University in the field of Geography and the English Language. Since 1993 Alexey is a member of Russian Geographic Society. He is friendly and outgoing person, deserved brilliant reputation in hunting society. Joined ProfiHunt in 2011.  
E-mail: Africa@profihunt.com  
Skype: ProfiHunt-Africa

**ALEXANDER PETRUSHENKO**  
Professional Hunter

Alexander is our experienced English-speaking Professional Hunter (PH). Alexander began hunting when he was 12 years old. He has graduated Vyatka State Agricultural Academy as a wildlife biologist and started working for ProfiHunt as a professional guide in 2011. Right from the beginning he proved himself as a hardworking cheerful guide ready to help in every situation with any matter. Alexander has many perfect hunts in his account.

**ALEXEY BUDIN**  
Professional Hunter

Alexey is one of our Professional Hunters, who accompany clients during their trips. He speaks German and English. He was born on 30 June 1979 in Kirov region, Russia. He started hunting in his childhood together with his father. In 2000 he graduated from the Game Management Department of Vyatka State Agricultural Academy. After that he continued his education majoring in Economics and Administration. Alexey has been working at ProfiHunt since June 2007. This cool-headed guy will solve any kind of problem that might occur during the hardest hunts.

**ALEXEY MAXIMOV**  
Professional Hunter

Alexey is a well known professional hunter of our company. He is always a great help to the hunter. He was born on 28 November 1977. He started hunting at the age of 10 and since that time wildlife was his passion. Alexey joined ProfiHunt Team in 2004. This talkative optimist is always ready for hunting adventures. He has guided hunts in Caucasus, Kamchatka, Kyrgyzstan and Canada. He guided over 100 hunts during last 10 years only in Caucasus. Alexey agenda is very busy as he is booked in advance.

**RIFAT DIANOV**  
Meet & greet manager

Transfers, airport and customs assistance. Works for ProfiHunt for more than 15 years already. Well known all over the world, all hunters arriving to Russia are passing through his friendly hands.

 Mid-Caucasian Tur (*Capra caucasica caucasica*)  
 Hybrid sheep (*Ovis sp*)

Dr.Miguel Estade 2016

John Baker 2016

**K**uban Tur is a highly desirable trophy. Only comparatively small part of Caucasus Mountains holds population of Kuban Tur. Hunting is a great challenging experience. Many hunters in the past got back home without seeing a single ram. We changed the situation completely. Since 2005 our clients have 100% success.

This trip can also be nicely combined with Caucasian Chamois hunt. Kuban Tur counts both towards the Ovis and Capra World Slams, and Chamois counts towards the Capra World Slam.

See our clients in SCI Record Book: Butch Kuflak, David F. Myrup, Dennis Campbell, Eduardo J.M. Gerlero, Gary D. Parker, George Harms, Jeffery L. Meyerl, Larry S. Lewis, Mike J. Borel, Richard Sand.

**S**ome Turs live on the eastern side of the Caucasus Mountains and called Dagestan or Eastern Tur, the other live on the western side of the Caucasus Mountains of Russia and known as Kuban (Western) Tur.

Mid-Caucasian Tur inhabits those areas where these two species are mixed - Nalchik area. The three different Turs count toward both the Ovis and Capra World Slams. With no doubts Tur hunts are the very demanding, you should be completely ready for this challenging adventure, but the reward worth it.

See our clients in SCI Record Book: Arthur R. Dubs, Gary D. Parker, Gary Rigotti, George Harms, Kenneth L. Barr, Larry Higgins, Richard Sand.

Bryan Bailey

Massimo Locatelli

Azerbaijan and Russia have the best areas and the best chances for high quality trophies of Dagestan Tur. Tur population is very strong here. It is not unusual to see groups of 20-30 mature males. Average trophy is 30-35 inches with some trophies up to 37 inches taken.

Dagestan Tur in Russia is rather a new destination, we arrange this hunt in North Ossetia republic, since now you can harvest all three subspecies of Turs within Russian borders, there is no need to change countries anymore, no extra flights and additional expenses.

The transfers between the areas are done by car.

Tur hunting is very challenging and it is one of the most demanding trophies. Dagestan Tur counts both towards the Ovis and Capra World Slams. It has more curved horns than other species of Tur - quite unusual for a goat, being smooth and rounded.

Anthony Hafla 2016

**C**hamois are graceful, nimble and surefooted animals that inhabit high alpine slopes. When alarmed, chamois hide in inaccessible places. Chamois look like a crossbreed of a mountain goat and an antelope and originate from the mountains of Asia and Europe. They are seldom found below 5,500 feet, and often live as high as 13,000 feet.

Chamois hunt is a combination of a great opportunity for sightseeing and challenge hunting. The Chamois counts toward the Capra World Slam.

It is easy to combine with one out of three Tur species or with all of them right away. These combinations are our strong points, we do these hunts for almost 20 years already, we know how to make every detail perfect to provide you with memorable experience.

For all hunting enquiries call the professionals on:  
**+1 (347) 587 8109** or email [hunt@profihunt.com](mailto:hunt@profihunt.com)

**K**amchatka Snow Sheep inhabit the central part of the Kamchatka Peninsula. The average trophy size is 30-35 inches with occasional 40 inch ram taken. These sheep have the heaviest bases of all snow sheep of Asia. We do not promise you to see a lot of rams but strive to make your hunt successful.

Kamchatka snow sheep is a 100% stalking hunt, you should expect to walk and climb a lot, live in a spike tent camps, The mountains are not that tough like in Caucasus, but still the challenge is very demanding and the hunter should keep far fit for it. Now when the flight from Anchorage to Petropavlovsk - Kamchatskiy was reopened the Snow sheep became closer for US hunters, there is no need to flight all over the world through Moscow anymore.

**In the hunting season 2014 our German customer Dieter Pfannenstien shot an amazing ram which is a NEW World Record with fantastic SCI 179 3/8 scores.**

**T**he north of Kamchatka Peninsula offers some exceptional hunting for Koryak snow sheep. This huge area still has excellent population of rams. Koryak Snow Sheep average size is 30-33 inches with occasional 40-inch ram taken. Sheep are found at 4,000–5,000 feet. **After August 20-th the Sheep hunting can be combined with Kamchatka Brown Bear.**

At the present moment the most convenient way to get to Petropavlovsk is to fly directly from Anchorage once a week. Our representative will meet you in the airport of arrival and will help you with custom and police formalities. Our English speaking guides will accompany you since your arrival up to your departure flight registration desk.

**In 2016 we had a 100% success rate with the very good trophy quality and a privilege to organize the hunt for such famous hunters like Jim Shockey, Jose Madrazo and George Latham Myers II.**

Russia has a vast opportunity for hunting different species of snow sheep. Snow sheep population in Russia is estimated to be around 57,700 heads and not including protected specie such as Putorana sheep. A large portion of sheep population is located in Yakutia, which is about 40,000 animals. Success rate is nearly 100%.

You fly to Moscow where you are met by our crew, and then you will fly to Yakutsk. We will do everything possible to expedite the customs procedure. From Moscow you are accompanied by ProfilHunt representative. From Yakutsk you will be transferred to the camp by helicopter MI-8. It takes almost two hours to get to camp.

For all hunting enquiries call the professionals on:  
**+1 (347) 587 8109** or email **[hunt@profilhunt.com](mailto:hunt@profilhunt.com)**

Russia has a vast opportunity for hunting different species of Snow Sheep; they can be found only in the most remote and practically inaccessible areas of Russia. Snow sheep population in Russia is estimated to be around 57,000 heads and not including a protected specie like Putorana Sheep.

Okhotsk Snow Sheep inhabits mountainous terrains of Khabarovsk region in Russia. Hunters can still found excellent populations of Snow Sheep there. Success rate is nearly 100%. This race of Okhotsk snow sheep has the largest white area on the forehead of all snow sheep, as well as the largest body size – identical to Kamchatka snow sheep.

Alexander Egorov 2016

**T**his sheep is found only in the Magadan Region, and predominantly in the Kolyma Mountain range. The eastern boundary is considered to be the large river valley west of the Koryak Mountains of the Koryak Autonomous Region.

The northern boundary is considered to be the Chukotka Autonomous Region border.

The western boundary is considered to be the border of Yakutia, from the Omolon River to the Kolyma River. The western boundary then follows the Kolyma River to the Trans-Siberian Highway.

The southern boundary is considered to be the Trans-Siberian Highway, which begins in the city of Magadan. This actually runs in a northerly direction. For all practical purposes, the range of the Kolyma sheep is west of the Koryak Mountains down through the Kolyma range of mountains, which are east of the Kolyma River.

**I**n 2014 the hunting for the Chukotka Snow sheep was open. This is the rarest and most remote variety of Snow sheep possible to hunt in Russia.

The area we are operating is the best available and very productive. The hunting season starts on 01- st of August and lasts until the middle of September when the weather is getting worse.

The area is only reachable with MI 8 helicopters and the flying time is about 8 hours. The hunt on Chukotka Snow Sheep can be successfully combined with Brown Bear on trophy fee only.

This season we had the privilege to organize this hunting for such famous mountain hunters like Jose Pepe Madrazo and Eduard Benderskiy. Do not lose your chance to get into history and be one of the first hunters ever harvested this rarest Snow Sheep!

**We have a few permits left for 2017. Book you hunt now!**

**K**amchatka Moose is the largest antlered animal in the world. Moose is immense, usually larger than you would expect. Antler spreads can vary considerably. The average moose has a spread of 61 inches. The Moose inhabit Chukotka and Kamchatka Peninsula.

Hunt is done on foot using the snowmobile for transportation in the area. The hunter and the guide will travel great distance by snowmobile looking for a track of a large moose bull. Your guide drives a snowmobile and you stay in the sledge behind. Once the fresh tracks are cut, hunters follow a moose on foot, snow shoes or skis.

This year we are proud to share with you our great results and a photo of a huge 76" bull take on a horse back hunt by our Danish hunter Soeren Sodemann!

**S**iberian Brown Bear is intermediate in size between Eurasian and Kamchatka Brown Bears. The fur is long, soft and dense. The collar is usually dark brown with noticeably darker legs. The Siberian Brown Bear occupies the largest habitat in Russia. The typical Siberian Brown Bear runs between eight – eight and a half feet with occasional nine foot bears taken.

Bears are typically congregated in areas where the first green grass shoots appear. They are hunted by spot and stalk, and also by baiting. Considerable walking is necessary, be sure to be in a good fit. In some areas hunting with boats is possible. Fall hunts are done on boat, foot, or by spotting and stalking while observing active salmon streams, berry patches and feeding areas.

**T**he hunting in Russian Far East gives you a lot of great opportunities for hunting a rare species like Amur Brown Bear, Hymalayan Brown Bear, Amur Moose, Manchurian Sika Deer, Manchurian Wapiti and Chinese Roe Deer.

There is a possibility to get all species booking a 21 day safari. Three different areas are to be hunted.

This season was extremely successful for all our hunters ended up with a new # 1 SCI Manchurian Wapiti taken by Alexander Egorov!

**Enjoy the endless hunting opportunities of Russia Far East with ProfiHunt in 2017!**

**E**uropean Moose can be found both in Europe and western Asia, from the Ural Mountains east to the Yenisei River and Altai Range in western Siberia. European Moose have fairly well developed antlers, often with decent palms that can weigh up to 44 pounds without the skull. European Moose from western Siberia are larger with more palmate antlers than those in European Russia.

Comfortable cabins and lodges are used to accommodate hunters in these areas. Every camp has with an interpreter and a cook. Each hunter is provided with two guides. Hunting is done on foot. Jeeps are used for transportation in the area. Hunt by calling in a mature bull moose is the most successful at this time.

Jim Shockey got his European Moose in Asian part of Russia in October 2016.

**I**n 2015 the hunting for the Severtzov Argali in Uzbekistan was reopened and very few licenses have been issued. This amazing animal is a very desirable trophy for every mountain hunter.

Famous Russian hunters Eduard Benderskiy and Alexander Egorov are ones who caught the luck and got such a great opportunity in 2016.

Do not miss your opportunity in 2017. It might be a last chance.

**Philippe Girardet**  
Amazing 1.251 Gr Roe Deer

**S**iberian Roe Deer hunt is very popular among the Russian and foreign hunters. At the end of August this hunting attracts hunters from all over the world in Kurgan, the area famous for the hunt on this species. ProfiHunt offers only the best areas where all record trophies were taken and you still have a chance to take a new one. The camps are comfortable hunting lodges, motels or cabins based on double occupancy with 2-4 hunters per camp. We have 6 different camps with possibility to accommodate up to 20 hunters at a time. All hunting is done on foot with transportation to the hunting area by jeeps. Spot-and-stalk is normally used; calling of roe deer bucks is also practiced there with a high degree success as well. Hunting area is easy. It is well developed agriculture area with a flat terrain.

**ProfiHunt had an awesome hunting season 2016 with some amazing trophies harvested by our clients, some of them will be in Top Ten SCI Record book. The biggest Roe deer was 1.251 Gr.**

Aaron Simser

**K**yrgyzstan is a famous destination for hunters seeking for a great adventure. The largest Ibex in the world and different subspecies of Argali – Tian Shan Argali, Marco Polo Argali and Hume Argali inhabit these mountains. Average size of sheep is 51-52 inches with occasional 60 inches trophy taken. It is an unforgettable adventure to hunt at 12,000 feet on a horseback, surrounded by a beautiful alpine panorama. Camps in Kyrgyzstan are traditional Asian yurts and wooden cabins. They are warm, clean and comfortable with separate areas for dining, bathing and sleeping and have electrical generation. You will find good food and quality service. Every camp is equipped with a satellite-phone or radio station.

Horses are used for most of Kyrgyzstan hunting trips in order to increase the success rate. Expect extensive horseback riding and considerable walking. Sheep are generally located in remote country at 12,000 feet. Once the trophy is located you complete your stalk on foot. Physical condition is an important factor for the stalking part of the hunt. Long range shooting, up to 350 yards is normal.

*We had a fabulous time. My wife really enjoy being there which made the hunt even better, excellent trophies, lots of animals and the lodging was great. I guess I can't say enough, but we will be back hunting with ProfilHunt for years to come. I have been on many hunts in US and I haven't been treated this good. Thank You*

David Zirbel 2016

Rudi Ketelsleger 2016

**K**yrgyzstan is a famous destination for big game hunters seeking for Mid-Asian Ibex and the fabulous Marco Polo Argali. Mid-Asian Ibex is the largest Ibex in the world with the horn length up to 60 inches.

For most of Kyrgyzstan hunting trips horses are used for transportation in the area to increase the success chances. Expect extensive horseback riding 8–10 hours a day and considerable walking. Some riding experience is a must. During the day you will explore the upper edges of the mountains and examine the hillsides and feeding areas through the field glasses. A temporary tented camp is set up with the specific goal of hunting a particular animal or area.

Physical condition is an important factor in the stalking part of the hunt. Long range shooting, up to 350 yards is usual. During the hunting season 2016 some of our clients were fortunate to get Ibex of 45-50" range.

**T**ajikistan offers excellent Marco Polo Argali hunt. Over the last 19 years our hunters enjoy 100% success. Average trophy size runs from 55 to 56 inches with several 60-62 inch rams taken every season. Outstanding 68 inch Marco Polo ram was taken in 2003 by our client Sheik Mohamed.

In the morning you get into your jeep. Horseback hunt is not available in Tajikistan. During the day you explore the upper edges of the mountains and examine the hillsides, feeding and resting areas through the field glasses. Once the trophy is located you complete your stalk on foot. In Tajikistan the camps are located at 12,000-13,500 feet. They are warm, clean and comfortable cabin with separate areas for dining, bathing and sleeping and has electrical generation. You will find good food and quality service. Every camp is equipped with a satellite-phone or radio station.

**All Marco Polo hunts in Tajikistan are fully escorted hunts by our English speaking PH's from your arrival until the departure.**

**K**azakhstan is a hunting paradise with great Tian Shan Wapiti and Mid-Asian Ibex hunting. The Tian Shan Wapiti is the largest of the Asian wapitis and a magnificent trophy. The antlers are massive and similar in form to those of North American wapitis. Hunting areas are located in Eastern Kazakhstan bordering with China. ProfiHunt Ltd has been guiding Maral Stag hunts for 18 years with over 90% success.

Bugling a mature elk is one of the greatest hunting thrills. It is not uncommon to hear six or nine Marals calling at the same time. Horses are used intensively to increase success chances. Expect extensive horseback riding 8-10 hours a day and considerable walking. Elk is generally located on open slopes of mountains at 8,000-8,500 feet. The prime hunting time is in the morning and in the evening. Camps are hunting cabins, tents or yurts. They are located in mountain valleys at 3,000-4,000 feet. You will find very good food and quality service. Electricity is supplied by generating sets.

You can nicely combine Maral with Mid-Asian Ibex on 14 day hunt. It also gives an opportunity to get a Siberian Roe deer.

Nils Sehested 2016 An amazing bull of 15 kg

**Y**ear after year our hunters are enjoying 100% success hunting for Mid-Asian Ibex in Kazakhstan. It is the most popular mountain hunt, because it is real adventure. Mid-Asian Ibex hunt is a classical spot-and-stalk hunt. Horses are of great help and can get hunters into prime game country. In some areas a great deal of riding is required. Ride before you go on this hunt. During the day you will explore the upper edges of the mountains and examine the hillsides, feeding and resting areas through the field glasses. Normally you see numerous Ibex during the day.

Tents, yurts or hunting cabins are used to accommodate the hunters in these regions. Base camps have no modern conveniences but they are clean and warm. In all base camps showers are available. In all base camps you will have a cook and interpreter. In spike camps you should expect ascetical conditions. Fly camps are set up on the plateaus at around 5,500–7,000 feet.

**T**his magnificent sheep inhabits Altai Mountains of western Mongolia, Russia and Kazakhstan. Mongolia is the only country where hunting for the Altai Argali is legal. Mongolian mountain desert steppe is an ideal habitat for sheep and ibex. This country became one of the most popular destinations for mountain hunters who expect a well organized hunt. The average trophy size is 50-52 inches, with a number of trophies taken in excess of 55-58 inches.

The hunting is done on foot using jeeps for transportation to the hunting area. Good number of rams is found at 7,000-8,500 feet. You will spot rams, evaluate their size, and then complete the stalk. The camps are traditional Asian yurts. They are warm, clean and comfortable with separate areas for dining, bathing and sleeping. Every camp has a cook and interpreter. You will find very good food and quality service. Electricity is supplied by generating sets.

Officially Hangay Argali is not considered to be a separate subspecies of Argali. The title was created in 1997 to make the registration of the trophies taken in the area located far from Altai Mountains to the North from Gobi Mountains. This area belongs to the southern range of Hangay Mountains. In the early 80-ties this trophy was proclaimed as Mid-Altai Argali and sold at lower prices than Altai Argali hunt.

Males that inhabit this area are smaller in body and horns size than males of Altai Argali, but bigger than Gobi Argali. To avoid confusion and to single out Hangay Argali as a separate species it was decided that Hangay Argali inhabits the areas to the west of the 97° eastern longitude and Gobi Argali inhabits the areas to the south of the 45° northern latitude.

**M**ongolian mountain desert steppe is an ideal habitat for sheep and ibex. This country became one of the most popular destinations for mountain hunters who can expect a well organized hunt. Gobi Argali is a magnificent sheep that inhabits Mongolian

Mountains. The specie was always of great interest for the hunters, and the trip itself was always among the most popular. The average size of Gobi Argali horns is 41-46 inches with the base diameter of 14-16 inches. Gobi Argali horns are not so heavy and are a bit shorter then those of Altai Argali.

In 2007 Gary Hansen took the New World Record trophy of Gobi Argali. The measurements totaled 226 3/8" points SCI.

Eduard Benderskiy

**M**ongolia offers a great variety of game for the hunters. Gobi Ibex inhabits Gobi desert, the coldest and farthest north of all deserts. Gobi desert is an arid high plateau located in Mongolia and China and surrounded by mountain ranges. Other big game species found here are Gobi Argali, White-tailed and Black-tailed Gazelle, Wolf.

The average length of the horns is 35-38 inches. The horns are slimmer and shorter than those of the Altai and Mid-Asian Ibex, however the cross ridges are often larger and closer together. General color is pale brown without a lighter saddle. This hunt can be nicely combined with Altai Ibex.

Dmitry Kotenkov 2016

"...I'm writing this letter to thank SCI and ProfiHunt for a wonderful time hunting in Mongolia for Ibex. I was successful and got two Ibex. The people in and around this trip, including all the camp sites were great! This is one in a lifetime trip and I'm so glad I could do it. I was especially impressed by the attention I received from ProfiHunt - they stuck with me and provided help when needed. So many of the other outfitters dropped their clients as soon as possible but not ProfiHunt, they maintained contact the whole 3 weeks I was outside the United States.

Sincerely yours,  
Norman R. Stewart"

**W**e are pleased to inform you that we can offer sport hunting in Iran, in game reserves accessible to foreign hunters for a limited and controlled off take. The most important wildlife trophies of the region are well represented and offer good to excellent opportunities to the trophy hunter. Our professional guides and staff will take care of you during the entire length of your stay in Iran.

Hunting camps are: wooden cabins or tents, in some areas guest houses. Our cooks will present you delicious domestic cuisine. Transportation between the areas is done by 4x4 vehicles, is it not possible to travel on domestic flights with the rifles and ammunition. Spot-and-stalk is done by feet. Some of the areas have difficult terrain; considerable climbing is involved.

**T**he nature of Pakistan provides ideal habitat for great variety of game. The Himalayan Ibex can be found in the mountain ranges of the Karakoram, western Himalayas and the Hindukush. The hunt takes place at the Hush valley, the gateway to the Karakoram Range. This area is one of the most successful community controlled conservancies. The success rate here is outstanding.

The northern areas near towns Gilgit and Skardu are especially populated with over 600 Ibex with 60+ mature trophy quality males. A male can stand 40 inches at the shoulder and weigh 200 pounds. Color is very variable, ranging from pale brown to dark brown. Blanford Urial and Sindh Ibex can be got in the South in a hill area around Dureji which is 4 hour drive from Karachi airport. It is possible to obtain both trophies within a few days as both species share the same habitat. Most of the hunting takes place at the altitude of 800-2100 feet. The average trophy size is 27-28 inches for the Blanford Urial and 37-38 inches for the Sindh Ibex.

**Eduard Benderskiy 2016**

Malcolm King

Andrei Zaika 2016, Vercor Chamois

The Chartreuse chamois is only found in the Chartreuse mountains between Grenoble and Chambéry. The specie prefers wooded areas and lower mountain terrain with the altitude between 1000 and 2000 meters. Similar to other chamois species it uses the environment to it's advantage and adapts to a very wide range of climates and plant varieties.

The hunting area for this magnificent chamois located in the middle of the Chartreuse Mountain national park, the only place in the world where you can hunt and officially register your trophy. The number of hunting permits is very limited and it is an important issue, to be sure of getting the permit in the right place, you should look for the hunt beforehand.

We can also offer you Vercor Chamois hunting in France.

RECORD**

Alexander Egorov with a World record Chartreuse Chamois

**A**natolian Ibex is one of the most beautiful mountain goats. It can be successfully hunted in Turkey. With its outstanding holiday and sightseeing opportunities and breathtaking mountain panorama, Turkey is one of the most popular destinations.

The Bezoar is a handsome, relatively slender animal with blackish-brown markings that contrast with the lighter overall color. Male Ibex can weight 80-200 pounds with average 40-41 inch horns length. The horns are large, scimitar-shaped, laterally compressed. The front edge is a sharp keel with a number of bold, sharp-edged, widely separated knobs. Some outstanding trophies of 50-55 inches are taken every year with special planning. Hunting camps range from luxury hotel to village house. You will find good food and quality service. Skilled camp stuff makes you feel comfortable.
